WAREHAM

185 ACRES

TO RT. 6

NOT FOR NAVIGATIONAL PURPOSES.

GLEN CHARLIE POND (Wareham)

General Information:

This 185-acre warm water pond is an impoundment of the Agawam River. Maximum depth is 12 feet. The bottom is mud throughout, although the northern end of the pond is studded with numerous tree stumps. Aquatic vegetation is abundant too heavy. The shoreline is roughly 40% developed with year round homes and summer cottages.

The pond is located two miles north of Route 6. There is public access through town-owned land at the gas pipeline crossing.

Fish Populations:

The fish population was most recently sampled during a 1978 summer survey. Twelve species were found at that time. They included chain pickerel, largemouth bass, smallmouth bass, yellow perch, pumpkinseed, bluegill, black crappie, white perch, white sucker, golden shiner, brown bullhead and sea-run alewife. Chain pickerel were the most abundant gamefish. Yellow perch were the most abundant panfish.

Fishing:

This pond provides good fishing for an assortment of warm water fish species. The largemouth bass in particular are abundant and of large average size. Smallmouth bass are scarce compared to the largemouths, but there are a few of them around.

This should be an excellent pond for ice fishing. The chain pickerel are healthy and numerous, as are the yellow perch. Panfishermen will also enjoy the bluegills and crappies (calicos), many of which are of large average size.
